LOGARITHMORVM CHILIAS PRIMA,

Quam autor typis excudendam curavit, non eo concilio, ut publici iuris fieret; sed partim, ut quorundam suorum necessariorum desiderio privatim satisfaceret: partim, ut eius adiumento, non solum Chilidas aliquot insequentes; sed etiam integrum Logarithmorum Canonem, omnium Triangulorum calculo inscrvientem commodius absolueret. Habet enim Canonem Sinuum, a seipso, ante Decemium, per aequationes Algebraicas, & differentias, ipsis Sinibus proportionales, pro singulis Gradibus & graduum centesimis, a primis fundamentis accurate extructum: quem una cum Logarithmis adiunctis, volente Deo, in lucem se daturum sperat, quam primum commode licuerit.

Quod autem hi Logarithmi, diversi sint ab ijs, quos Clarissimus inventor, memoria semper colenda, in suo edidit Canone Mirifico; sperandum, eius librum posthumum, abunde nobis propediem satisfacturum. Qui auctori (cum eum domi sua, Edinburgi, bis inuiferet, & apud eum humanissime exceptus, per aliquot septimanas libentissime mansisset; eique horum partem precipuam, quam tum absoluerat ostendisset) suadere non destitit, ut hunc in se laborem susciperet. Cui ille non inuitus morem gessit.

In tenui; sed non tenuis, fructuive laborve.
